## BirdNet PE-Plus Instructions

**HOW TO INSTALL:** Each job is different and demands some on-site ingenuity. The four most common application techniques are pictured below.

<p><b>Wire and Polyclips</b>          Often used on concrete, brick or steel structures. Polyclips easily fold over wire and snap together through netting spacing 1' – 3' apart depending on job. Case of 250 Polyclips from Bird-X, part # MTG-CASE \$108.</p>	<p><b>Epoxy Caulk</b>          High quality epoxy caulk is readily available at local hardware stores and has been successfully used on concrete brick and steel. Or, Special Adhesive (for caulking gun) from Bird-X, part #SSA, 1 tube, \$8.</p>	<p><b>Plastic Band &amp; Staples</b>          On wood structures a plastic banding has been manually woven into netting skipping every 4 or 5 strands. This allows stapling to a solid surface rather than a single netting strand.</p>	<p><b>Wood Lathe Strip</b>          Installations on wooden structures can easily be accomplished using wood lathe strips and nails.</p>

**How long will netting last?** Once installed, durability will depend on the amount of exposure to sunlight. The netting is stabilized with chemical additives designed to give up to several years effective life.

**Where has BirdNet been used?** Among satisfied users are Arlington Park Race Track, Kansas City Airport, McGuire AFB, Langley AFB, Lesters, Inc. (modular agricultural buildings) and many others.

**How do you cover widths wider than the width of the netting?** Jobs requiring wider widths can be easily handled by running a wire and using polyclips to fasten net to both sides, or by splicing net together manually using a high quality UV treated twine and a plastic needle.

Call us at 800-662-5021 to get a BirdNet installation video, or to discuss visual or sound repellents, both of which work well in conjunction with BirdNet.
