Puracol • Puracol Plus Ag+ • Optifoam • Derma-Gel • OptiLock • Gentac
Assessing and treating wounds is a daily challenge. This is why Medline is committed to creating products and educational resources that empower clinicians to improve outcomes and reduce costs.

The DIMES® system of wound bed preparation and treatment provides a simple guide to assist you in selecting the right product, at the right time, for your patient’s wounds.

What do DIMES have to do with chronic wound care?

DIMES serves as a framework for planning and implementing an effective treatment plan for wounds using valuable resources wisely.

We all realize that preparation is the key to care. This is also true in preparing wounds for healing. The Wound Bed Preparation (WBP) Paradigm is a practical guide for the treatment of chronic wounds (see Figure 1).1,2,3,4

Figure 1

©Sibbald, Woo and Ayello
DIMES: an organized and consistent approach to Wound Care

As always, the patient comes first. Address patient-centered concerns and treat the cause of the wound before optimizing local wound care.¹

The components of local care are¹:

<table>
<thead>
<tr>
<th>DIMES</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Debridement</td>
<td>The removal of nonviable tissue</td>
</tr>
<tr>
<td>Infection/Inflammation</td>
<td>Addressing bioburden and inflammation within the wound</td>

<td>Achieving and maintaining moisture balance in and around the wound</td>
</tr>
<tr>
<td>Edge/Environment</td>
<td>Treating stalled wounds where epithelium fails to migrate</td>
</tr>
<tr>
<td>Supportive Products, Services and Education</td>
<td>Appropriate support promotes optimal outcomes</td>
</tr>
</tbody>
</table>

Evidence Based References
It is important to understand that DIMES is not just an acronym but a roadmap for practice.¹

**Debridement**

The first step in wound healing is the removal of necrotic tissue that can impede the growth and proliferation of healthy granulating tissue.¹

**Infection/Inflammation**

All wounds contain a level of bacteria. Since all wounds are different it is important that a clinician evaluate the wound and determine the proper antimicrobial treatment.¹

**Moisture Balance**

Achieving the right moisture balance can be a challenge. Too much moisture can lead to periwound maceration and skin breakdown, while too little moisture can impede cellular activities and promote eschar formation, resulting in poor wound healing.¹

**Edge/Environment**

If the wound edge is not migrating after appropriate wound bed preparation (debridement, infection/inflammation, moisture balance) and healing is stalled, then advanced therapies should be considered.¹

**Supportive Products, Services and Education**

There are other products that complement DIMES but do not fit into one of the above categories. Therefore, always consider the “other” supportive products to complete the treatment.

Additionally, supportive services and education are paramount to achieving the best possible outcome.¹
### Table of Contents

Connecting the **right product** to the **right application** is critical. *Today’s Wound Care Treatments* from Medline is organized using the first letter of each component of care, D-I-M-E-S. To make it even easier we’ve provided a chart to guide you through each component of the DIMES system and solutions that Medline provides. Note each section is color coded by letter.

TenderWet® Active
Polyacrylate Debriding Wound Dressing

About TenderWet Active
- Debrides necrotic wounds
- Absorbs and retains microorganisms
- Uses physiologically-compatible Ringer’s solution
- More effective than wet gauze therapy
- Will not stick to wound bed, which helps ease the pain of dressing changes
- Cost-effective
- Helps create an ideal moist healing environment
- High fluid retention
- Easy application and removal

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Diabetic ulcers
- Surgical wounds
- Lacerations and abrasions
- Skin tears
- Dry, light and moderately draining wounds
- First- and second-degree burns

Contraindications
None

Change Frequency
TenderWet may be left in place for up to 24 hours
Dressing change frequency will depend on the amount of drainage

Recommended Secondary Dressings
- Medfix Tape
- Bordered Gauze
- Stratasorb Composite

TenderWet Debridement Rate

...Polyacrylate dressings are an effective, atraumatic and easy to use method of debriding chronic wounds.

Arglaes®
Antimicrobial Silver Wound Dressing

**POWDER AND FILM WITH SILVER**

### About Arglaes
- Manages bacterial burden
- Continuous antimicrobial protection
- Extended wear time
- Non-staining
- Can convert any other dressing to an antimicrobial (*Arglaes Powder*)

### Recommended Wound Conditions
- Shallow: No/Minimal drainage
- Deep: Moderate/Heavy drainage
- Primary dressing
- Secondary dressing

* Film Only
** Powder only

### Indications
- Pressure ulcers
- Diabetic foot ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Central lines, CVPs and PICC lines (*Arglaes Film only*)
- Surgical wounds (*Arglaes Film only*)
- Negative pressure wound therapy (*Arglaes Powder only*)
- Grafted wounds (*Arglaes Powder only*)
- Donor sites
- Lacerations and abrasions
- First- and second-degree burns

### Contraindications
- Third-degree burns
- Patients with a known sensitivity to silver
- As a surgical implant
- Do not use topical antibiotics in conjunction with Arglaes

### Change Frequency
- Arglaes Film may be left in place for up to 7 days
- Arglaes Island and Arglaes Powder may be left in place for up to 5 days
- Dressing change frequency will depend upon the amount of drainage

### Recommended Secondary Dressings (Powder)
- Stratasorb Composite
- Bordered Gauze
- Suresite 123+Pad

About Maxorb Extra Ag
- Helps manage bacterial burden\textsuperscript{1,2}
- Continuous antimicrobial protection\textsuperscript{1,3}
- Cost-effective\textsuperscript{4}
- Easy dressing changes
- Highly absorbent\textsuperscript{5}
- Superior gelling and fluid handling\textsuperscript{5}
- Reduces odor\textsuperscript{6}
- Fluid will not wick laterally
- Up to 21-day protection

Indications
- Pressure ulcers\textsuperscript{6,7}
- Leg ulcers
- First- and second-degree burns\textsuperscript{8}
- Moderate to heavily draining partial and full-thickness wounds
- Diabetic foot ulcers
- Surgical wounds
- Graft and donor sites
- Trauma wounds

Contraindications
- Third-degree burns
- Dry or lightly draining wounds
- Patients with a known sensitivity to alginates or silver
- To control heavy bleeding
- As a surgical implant

Change Frequency
Maxorb Extra Ag may be left in place for up to 21 days\textsuperscript{8}
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Stratasorb Composite
- Bordered Gauze
- Suresite 123+Pad
Ordering Information

Ionic silver for targeted antimicrobial protection and fluid management.

Optifoam Ag
Antimicrobial Silver Wound Dressing

About Optifoam Ag
• Ionic silver provides antimicrobial barrier
• Continuous antimicrobial protection
• Highly absorbent
• Conformable
• Can manage repeated bacteria introduction
• Non-staining

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Surgical wounds
- Wounds with colonization
- Leg ulcers
- Diabetic foot ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns
- Under compression bandages

Contraindications
- Third-degree burns
- Lesions with active vasculitis

Change Frequency
Optifoam Ag may be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Medfix Tape
- Gentac Tape
- Elastic Net
- Medigrip Tubular Bandage

Optifoam® Gentle Ag+  
Silver Antimicrobial Wound Dressing with Silicone Adhesive Border

About Optifoam Gentle Ag+  
- Silicone border provides gentle adhesion  
- Highly conformable¹ border can be lifted and reapplied  
- Ionic silver provides antimicrobial barrier¹  
- Can manage repeated bacteria introduction  
- Continuous antimicrobial protection¹  
- Highly absorbent¹  
- Non-staining  
- Low Friction and Shear outer layer

Indications
- Pressure ulcers  
- Partial and shallow full-thickness wounds  
- Surgical wounds  
- Wounds with colonization  
- Leg ulcers  
- Diabetic foot ulcers  
- Donor sites  
- Lacerations and abrasions  
- Skin tears  
- First- and second-degree burns

Contraindications
- Third-degree burns  
- Lesions with active vasculitis  
- Individuals with a known sensitivity to silver

Change Frequency
- Optifoam Gentle Ag may be left in place for up to 7 days  
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- N/A

Derma-Gel®
Hydrogel Sheet Wound Dressing

Recommended Wound Conditions
- Shallow
- Deep
- No/Minimal drainage
- Moderate/Heavy drainage
- Primary dressing
- Secondary dressing

About Derma-Gel
- Manages bacterial burden
- Highly absorbent
- Cushions and protects wound
- Helps create moist wound environment
- Easy to apply and remove

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Surgical wounds
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Patients with known hypersensitivity to glycerin

Change Frequency
- Derma-Gel may be left in place for up to 5 days
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Medfix Tape
- Suresite® Film (for waterproofing)
- Elastic Net
- Medigrip Tubular Bandage

Absorption Comparison
- Derma-Gel has a very high absorption capacity.

Evidence Based References
2. Independent study performed by NAMSA, Northwood, Ohio.
Ordering Information
Soft and flexible, Derma-Gel promotes a moist environment and can absorb up to five times its weight.

To order by the box, add a “Z” to the end of the item number.

Exuderm OdorShield®
Hydrocolloid Wound Dressing

About Exuderm OdorShield
- Absorbs odor with cyclodextrin technology¹,²
- Not inactivated by wound protein²
- Manages drainage³
- Longer wear time
- Low residue formula⁴
- Protective, occlusive barrier
- Satin finish backing

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Donor sites
- Wounds with light to moderate drainage
- Lacerations and abrasions
- First- and second-degree burns

Contraindications
- Third-degree burns

Change Frequency
Exuderm OdorShield can be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary dressings
N/A

Evidence Based References

Odor Test Results

Rating:
0. No odor in vial
1. Very slight odor
2. Moderate odor
3. High odor
4. Comparable to reference odor

The human nose can detect the odor absorbing capacity of Exuderm OdorShield compared to DuoDERM.

Maxorb® Extra
CMC/Alginate Wound Dressing

About Maxorb Extra
• Highly absorbent
• Superior fluid handling
• Fluid will not wick laterally
• Easy dressing changes

Indications
Pressure ulcers
Partial and full-thickness wounds
Leg ulcers
Diabetic ulcers
Surgical wounds
Donor sites
Lacerations and abrasions
First- and second-degree burns

Contraindications
Third-degree burns
For use as a surgical sponge
Dry wounds
Patients with a known sensitivity to alginates

Change Frequency
Maxorb Extra may be left in place for up to 5 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
Stratasorb Composite
Bordered Gauze
Suresite 123+Pad

Evidence Based References
Ordering Information
Fast-acting absorption without lateral wicking.

To order by the box, add a "Z" to the end of the item number.

Optifoam®
Foam Wound Dressing

About Optifoam
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Will not curl at edges
- Highly absorbent
- Helps create ideal healing environment
- Waterproof outer layer protects wound and keeps bacteria out

Indications
- Pressure ulcers
- Partial and full-thickness wounds
- Leg ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns

Contraindications
- Third-degree burns
- Lesions with active vasculitis

Change Frequency
Optifoam may be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Medfix Tape (for Optifoam Non-Adhesive)
- Elastic Net (for Optifoam Non-Adhesive)

Optifoam can be used as a secondary dressing

Fluid Handling Comparative Study

Powerful ability to manage wound fluids due to MVTR.

Evidence Based References
Ordering Information

Soft, conformable foam dressing.
To order by the box, add a "Z" to the end of the item number.

Optifoam® Gentle
Foam Wound Dressing with Silicone Adhesive Border

About Optifoam Gentle
- Silicone border provides gentle adhesion
- Highly conformable border can be lifted and reapplied
- Moisture vapor transmission rate (MVTR) adjusts to fluid level
- Will not curl at edges
- Highly absorbent
- Helps create ideal healing environment
- Waterproof outer layer protects wound and keeps bacteria out
- Low friction and shear outer layer

Indications
- Pressure ulcers
- Partial and shallow full-thickness wounds
- Leg ulcers
- Donor sites
- Lacerations and abrasions
- Skin tears
- First- and second-degree burns

Contraindications
- Third-degree burns
- Lesions with active vasculitis

Change Frequency
Optifoam Gentle may be left in place for up to 7 days
Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
N/A

OptiLock®
Non-Adhesive, Super-Absorbent Wound Dressing

Recommended Wound Conditions
- Shallow No/Minimal drainage Primary dressing
- Deep Moderate/Heavy drainage Secondary dressing

About OptiLock
- Super-absorbent polymer core
- Locks in drainage under compression
- Adjusts absorption to the amount of drainage
- Protects skin from maceration
- Non-adherent wound contact layer

Indications
- Pressure ulcers
- Partial- and full-thickness wounds
- Leg ulcers
- Lacerations and abrasions
- Wounds under compression

Contraindications
- Third degree burns
- Known sensitivity to the product itself or its components
- Do not use on non-exudating or minimally exudating wounds

Change Frequency
- OptiLock may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings
- Medfix tape
- Elastic Net
- Gentac Tape
- Compression bandages
OptiLock
Non-adherent and super absorbent

Ordering Information
Super-absorbent dressing with a non-adherent facing.

To order by the box, add a “Z” to the end of the item number.

Moisture Balance

OptiLock absorbs approximately three times more fluid than a leading silicone-faced foam dressing.

Fluid Loss Under Compression
OptiLock dressings retain substantially more fluid under compression than a leading silicone-faced foam dressing.

Absorption Capacity Under Compression
OptiLock absorbs approximately three times more fluid than a leading silicone-faced foam dressing.

Suresite®
Transparent Film Wound Dressing

**Recommended Wound Conditions**
- Shallow
- No/Minimal drainage
- Deep
- Moderate/Heavy drainage
- Primary dressing
- Secondary dressing

**About Suresite**
- Traditional moisture vapor transmission rate (MVTR)
- Conformable
- Won’t stick to itself
- Microporous technology
- Permits continuous observation
- Variety of delivery systems

**Indications**
- Partial-thickness wounds
- Full-thickness wounds (secondary dressing)
- Peripheral and central I.V. lines
- Skin tears
- Lacerations and abrasions
- To help prevent skin breakdown caused by friction to epidermis

**Contraindications**
- Contraindicated as a primary dressing on wounds with moderate to heavy drainage

**Change Frequency**
- Suresite may be left in place for up to 7 days
- Dressing change frequency will depend on amount of drainage

**Recommended Secondary Dressings**
- N/A

About Puracol Plus

- 100% collagen with a high degree of nativity\(^1,2\)
- High gel integrity\(^3\)
- Helps promote natural healing
- Jump-starts stalled wounds\(^4,5,6\)
- Biodegradable

About Puracol Plus Ag\(^+\)

In addition to all the benefits of Puracol Plus:

- Ionic silver provides antimicrobial barrier\(^8,9\)
- Non-staining

Indications

- Pressure, Venous, Diabetic Ulcers
- Partial and full-thickness wounds
- Ulcers caused by mixed vascular etiologies
- Burns
- Donor sites and other surface wounds
- Abrasions
- Traumatic wounds healing by secondary intention
- Dehisced surgical wounds

Contraindications

Active vasculitis or patients with known sensitivity to collagen and/or silver

Change Frequency

Puracol Plus and Puracol Plus Ag\(^+\) may be left in place for up to 7 days

Dressing change frequency will depend on amount of drainage

Recommended Secondary Dressings

Stratasorb Composite
Border Gauze
Optifoam\(^\circledast\) Adhesive
Suresite 123+Pad
Ordering Information

Advanced, native collagen with a unique three dimensional structure that helps promote cell growth.

To order by the box, add a "Z" to the end of the item number.

### Puracol Plus Ideal for wounds that are chronic or stalled

</tbody>
</table>

### Microscopic View

The intact super-structure provides strong evidence that the nativity of the collagen triple helix is preserved.

### Puracol Plus Microscaffold

The open porous structure increases the internal surface area for maximal interaction with wound fluids and wound fibroblasts.

### Reduction in bacteria levels with Puracol Plus Ag+

<table>
<thead>
<tr>

FourFlex and ThreeFlex

Multi-Layer Bandage System

About FourFlex and ThreeFlex
- Effective appropriate compression
- Extended wear time
- Absorbs drainage
- Efficient packaging

Indications
Treatment of chronic venous insufficiency

Contraindications
Patients with an Ankle Brachial Pressure Index (ABI) of less than 0.8. An ABI of less than 0.8 may mean that the patient has arterial insufficiency or the leg ulcer is of mixed etiology.

Change Frequency
Multi-layer compression bandages may be left in place for up to 7 days.
Dressing change frequency will depend on amount of drainage.

Recommended Secondary Dressings
Usually no secondary dressing is required.

ABI Chart
To determine the Ankle Brachial Index (ABI), divide the ankle systolic pressure by the brachial systolic pressure.

Ankle Pressure
----------------------
| ABI | Brachial Pressure |

Interpretation of the Ankle Brachial Index

<table>
<thead>
<tr>

Compression Testing of Bandages

Based on principles contained in BS 6612

<table>
<thead>
<tr>
<th>Test Material</th>
<th>Test</th>
<th>Limb Circumference (cm)</th>
<th>Pressure (mm/Hg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medigrip</td>
<td>1</td>
<td>17.2</td>
<td>7.2</td>
</tr>
<tr>
<td>Tubigrip</td>
<td>1</td>
<td>17.2</td>
<td>5.8</td>
</tr>
<tr>
<td>Medigrip</td>
<td>2</td>
<td>18.7</td>
<td>7.0</td>
</tr>
<tr>
<td>Tubigrip</td>
<td>2</td>
<td>18.7</td>
<td>6.1</td>
</tr>
</tbody>
</table>

Summary:
Although the statistical analysis indicated that the pressures produced by the two products are different, this difference is unlikely to prove significant in the clinical situation.

Independent study performed by SMTL, Bridgend, Wales

BS6612, (1985, 1993)
**Ordering Information**

Provides even support and pressure to reduce edema and assist in venous return.

---

*For a full arm coverage, measure the largest part of the forearm. For a full leg or below the knee coverage, measure the widest point of the calf. And, for the hand, measure around metacarpophalangeal joint.

**Low = 5-10 mm Hg Mercury (for General edema)  Medium = 10-20 mm Hg (for Varicose conditions/post burn scarring) High = 20-30 mm Hg (for Soft tissue injuries/joint effusions)
Unna-Z
Unna-Boot Bandage

About Unna-Z
• Maintains a moist healing environment
• Impregnated with zinc oxide*
• Provides light compression
• Inner core for easy application

Indications
Venous leg ulcers

Contraindications
Patients with a known sensitivity to components (zinc and/or calamine)

Change Frequency
Unna-Z can be left in place for up to 7 days, depending on drainage

Recommended Secondary Dressings
Compression Coflex LF2 - MDS089004
Bulkee® Gauze Wrap – NON25865

*Items NONUNNA3 and NONUNNA4 contain calamine and zinc oxide.
Ordering Information
Maintains a moist healing environment and provides light compression for venous leg ulcers.

To order one bandage, add an “H” to the end of the item number.

Secondary Dressings

Adhesive Island Wound Dressings

About Secondary Dressings

- Deluxe soaker pad
- Non-woven adhesive border
- Waterproof backing *(Stratasorb)*
- Water resistant backing *(Bordered Gauze)*
- Ideal for incision sites

Indications

Pressure ulcers
Partial and full-thickness wounds
Incision sites

Contraindications

Third-degree burns
Patients with a known sensitivity to components of the dressing

Change Frequency

Change the dressing as indicated by the amount of drainage or as frequently as the primary dressing indicates

Recommended Secondary Dressings

N/A
## Ordering Information

Island dressings protect, absorb and help maintain proper wound moisture.

To order by the box, add a “Z” to the end of the item number.

Skintegrity®
Wound Cleanser

About Skintegrity Wound Cleanser
- Easy cleansing
- Adjustable trigger, PSI of 8.6 at 3"
- Within AHCPR guidelines

Indications
To clean a wide variety of wounds including:
- Pressure ulcers
- Partial and full-thickness wounds
- Infected and non-infected wounds

Contraindications
Patients with a known sensitivity to ingredients in Skintegrity Wound Cleanser

Change Frequency
With every dressing change

Recommended Secondary Dressings
N/A

Ordering Information
Delivers gentle yet thorough cleansing.

Marathon®

Liquid Skin Protectant

About Marathon Liquid Skin Protectant

- Robust, flexible and long-lasting
- No stinging: contains no solvents or activators
- Protects from the effects of friction
- Protects from moisture (urine, exudate, sweat, and other bodily fluids) that can cause maceration
- Can be used on intact or damaged skin
- Fast drying
- Breathable
- Marathon shows greater protective capabilities than 3M Cavilon® against corrosive fluids (synthetic urine) and wash-off.*

Indications

- Damaged Skin
- Fragile skin
- Periwound skin
- Peristomal skin

Contraindications

- Second or third degree burns
- Infected areas
- Directly to the wound bed, or to deep puncture wounds

Change Frequency

Up to 3 days, reapply as needed

Recommended Secondary Dressings

N/A

Sureprep® and Sureprep® No-Sting
Skin Protectant

About Sureprep and Sureprep No-Sting
• Protects from adhesive stripping\(^1,2\)
• Safe for delicate skin\(^3\)
• Outperformed 3M Cavilon in controlled trials.\(^4\)
• Fast drying\(^5\)
• Vapor permeable
• Creates a waterproof barrier on periwound skin
• Protection from friction and body fluids
• Transparent

Indications
Periwound skin
Peristomal skin
Damaged skin (Sureprep No-Sting)
Incontinence Protection and Barrier

Contraindications
Direct application to wound bed
Denuded or macerated skin (Sureprep)

Change Frequency
With every dressing change

TransEpidermal Water-Loss (TEWL)\(^4\)
On day 4 and day 5 subjects using Sureprep No-Stings experienced significantly less water loss than subjects using 3M Cavilon No-Sting; indicating that Sureprep No-Sting provides greater protection from adhesive stripping.

Evidence Based References
Ordering Information
Helps create a barrier on periwound skin to protect from maceration, and adhesive stripping.

To order by the box, add a “Z” to the end of the item number.
To order one packet or bottle add an “H” to the end of the item number

NE1™ Wound Assessment Tool

Measurement / Assessment Device

ACCURATE IDENTIFICATION, CONSISTENT DOCUMENTATION

About NE1 Wound Assessment Tool:

- Easy to use color matching technique
- Improve overall accuracy in wound assessment by 100%
- Standardizes wound documentation
- Free online education

Indications

All wounds

Contraindications

None

Use Frequency

- One time use, during each wound evaluation
- Upon admission and discharge at minimum

Improved Wound Assessment Accuracy

The study showed a statistically significant improvement in wound assessment. Overall, the clinicians more than doubled their accuracy with the help of the NE1 Wound Assessment Tool.¹

**Today's Wound Care Treatments from Medline**
Classification of Tissue Destruction in Pressure Ulcers

Wounds not caused by pressure such as skin tears, donor sites, vascular ulcers, surgical wounds and burns are described as partial or full-thickness to indicate the depth of tissue destruction.

- **Partial-Thickness (like Stage II)**
- **Full-Thickness (like Stage III or IV)**

Ulcers caused by pressure are staged. This is a method of classifying pressure ulcers, describing the degree of tissue damage observed. According to the NPUAP, pressure ulcer is a localized injury to the skin and/or underlying tissue usually over a bony prominence, as a result of pressure, or pressure in combination with shear and/or friction. A number of contributing or confounding factors are also associated with pressure ulcers; the significance of these factors is yet to be elucidated. *NPUAP, 2007*

**STAGE I**

Intact skin with non-blanchable redness of a localized area usually over a bony prominence. Darkly pigmented skin may not have visible blanching; its color may differ from the surrounding area.

Further description:
- The area may be painful, firm, soft, warmer or cooler as compared to adjacent tissue. Stage I may be difficult to detect in individuals with dark skin tones. May indicate “at risk” persons (a heralding sign of risk).

**STAGE II**

Partial-thickness loss of dermis presenting as a shallow open ulcer with a red pink wound bed, without slough. May also present as an intact or open/ruptured serum-filled blister.

Further description:
- Presents as a shiny or dry shallow ulcer without slough or bruising.* This stage should not be used to describe skin tears, tape burns, perineal dermatitis, maceration or excoriation. *Bruising indicates suspected deep tissue injury.

**STAGE III**

Full-thickness tissue loss. Subcutaneous fat may be visible but bone, tendon or muscle are not exposed. Slough may be present but does not obscure the depth of tissue loss. May include undermining and tunneling.

Further description:
- The depth of a stage III pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput and malleolus do not have subcutaneous tissue and stage III ulcers can be shallow. In contrast, areas of significant adiposity can develop extremely deep stage III pressure ulcers. Bone/tendon is not visible or directly palpable.

**STAGE IV**

Full-thickness tissue loss with exposed bone, tendon or muscle. Slough or eschar may be present on some parts of the wound bed. Often include undermining and tunneling.

Further description:
- The depth of a stage IV pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput and malleolus do not have subcutaneous tissue and these ulcers can be shallow. Stage IV ulcers can extend into muscle and/or supporting structures (e.g., fascia, tendon or joint capsule) making osteomyelitis possible. Exposed bone/tendon is visible or directly palpable.

**SUSPECTED Deep Tissue Injury (DTI)**

Purple or maroon localized area of discolored intact skin or blood-filled blister due to damage of underlying soft tissue from pressure and/or shear. The area may be preceded by tissue that is painful, firm, mushy, boggy, warmer or cooler as compared to adjacent tissue.

Further description:
- Deep tissue injury may be difficult to detect in individuals with dark skin tones. Evolution may include a thin blister over a dark wound bed. The wound may further evolve and become covered by thin eschar. Evolution may be rapid exposing additional layers of tissue even with optimal treatment.

**UNSTAGEABLE**

Full-thickness tissue loss in which the base of the ulcer is covered by slough (yellow, tan, gray, green or brown) and/or eschar (tan, brown or black) in the wound bed.

Further description:
- Until enough slough and/or eschar is removed to expose the base of the wound, the true depth, and therefore stage, cannot be determined. Stable (dry, adherent, intact without erythema or fluctuance) eschar on the heels serves as “the body’s natural (biological) cover” and should not be removed.

Educational Packaging

Many nurses find themselves in situations on a daily basis where valuable time is wasted searching for the right dressing. Often the wrong dressing is used or the dressing is not used properly. By listening to you, we found a way to improve this process and ensure that nurses have the information they need. It is called EP… Educational Packaging. Products available in EP will now have an “EP” at the end of the item number.

The package focuses on patient safety and correct product application. Each package serves as a 2-Minute Course on Wound Care™.

Many times the outer box is thrown away and the product is distributed to the end user by the inner package. For that reason Medline provides an educational show-and-tell booklet of all the pertinent information needed to provide bedside support to the nurse, the patient, and the family.

Education is not just for clinicians so they know and use the latest evidence base in their practice, but it is essential for their patients and their families. Making sure the patients and their family are taught the expected outcomes and the plan to achieve them is vital for successful wound treatment.
A Complete Educational Program for Clinicians and Patients

Our Compass Wound Care Prevention and Treatment program contains education at every level from the wound care champion at your facility to the bedside nurse to the patient/resident and their family. The program contains The Wound Care Handbook, wound care pocket guides, patient education brochures, and a CD containing 225 images organized by wound categories.

70 Patient/Family Education Brochures
A 2-minute course for patients and their family on how to care for their wounds.
- Pressure Ulcers
- Venous Ulcers
- Arterial Ulcers
- Neuropathic/Diabetic Ulcers
- Skin Tears

The Wound Care Handbook
For the wound care champion to help educate the staff.
- This book has it all—from the basics of wound care to industry guidelines

Wound Images CD
For staff education.
- Includes 225 images sorted by wound care stages and types of wounds

The Wound Care Pocket Guide
For the clinician at the bedside who is treating wounds.
- More than 120 pages of concise wound care information in an easy-to-use format

For more information, visit www.medline.com/woundcare or contact your sales specialist.

Survey Readiness for
Long-Term Care Tags F309/314

1. D.O.N. instructional manual (teacher’s guide)
2. Survey readiness resource books
3. DVD Educational Program
4. Wound measuring rulers
5. Continuous pressure ulcer prevention booklets

Compass Diabetes program:
Compass Diabetes Resource for Long-Term Care

With 26 percent of nursing home residents battling diabetes and its complications, this Compass program provides educational tools for residents, their families and caregivers.

Education

Educare® Seminars
Medline offers Educare seminars in cities across the United States. These in-depth programs provide wound and skin care education for all levels of clinical staff. Educare programs are approved for continuing education hours and are taught by board-certified wound care nurses. Medline also has a number of other educational programs available to meet the needs of your patients, facility and caregivers.
Education

Educare® Hotline Managed by Wound Care Nurse Specialists
An important number to remember is 1-888-701-SKIN (7546) because it provides access to our Educare Hotline. It is managed by board-certified Wound Care Nurses and supported by a network of advanced wound care product specialists. The nurses are available to answer questions and concerns on product usage such as application and appropriateness of the dressing for the wound condition.

The Educare Hotline is staffed Monday through Friday from 8 a.m. to 5 p.m. Central Standard Time.

Product Support at www.medline.com/woundcare
Medline’s Web site is another way to get up-to-date product information. You will find the latest brochures as well as application videos online at www.medline.com/woundcare. The interactive product selector can also help you choose the best product based upon the wound conditions.

More Than 60 Wound and Skin Care Product Specialists
Receiving help from one of Medline’s 60+ wound care product specialists has never been easier. In addition to our 800 person sales force, the wound care product specialists are devoted to supplying you with appropriate wound care products, services and educational support. This team is highly trained and available to deliver on-site, face-to-face inservice for your staff.

For more information, see www.medline.com/woundcare or contact your sales specialist.

Educare® Hotline Posters available for your facility.

Custom Wound Care Formulary posters, for easy reference, available for your facility. Customization based on your Medline product choices.
Education

Medline University
Medline University offers continuing education programs and accredited continuing nursing education opportunities. We offer a wide array of educational opportunities on topics that are current and relevant to your staff. The courses are presented in an online format so you can take them at your convenience. All you need is a connection to the internet! The course content, test and CE certificate are online. Visit our Web site www.medlineuniversity.com for more information.

Professional healthcare education from Medline, now available on your iPhone® or iPod iTouch®. Visit the Apple store (store.apple.com) to download the MU iPhone app and start accessing courses, newsfeeds, resources and much more – right from your iPhone!

Chart Your Progress
• Register
• Check course listings
• View your transcript

Build Your Knowledge
• Browse hundreds of articles and papers
• Watch expert presentations
• Read up-to-the-minute health news
